

AI-Enabled Payroll Automation

Eliminated Over 6,000 hours of repetitive manual tasks

Payroll Automation Project

Project Schedule

Mar 2025 to May 2025

Client

Private Equity Mid-Market Staffing Agency

Project Size

\$10,000 to \$49,999

Services Provided on this Project

AI Development, AI Consulting, Generative AI, Custom Software Development

Focus Areas

Python, SQL, Programming/Scripting Languages

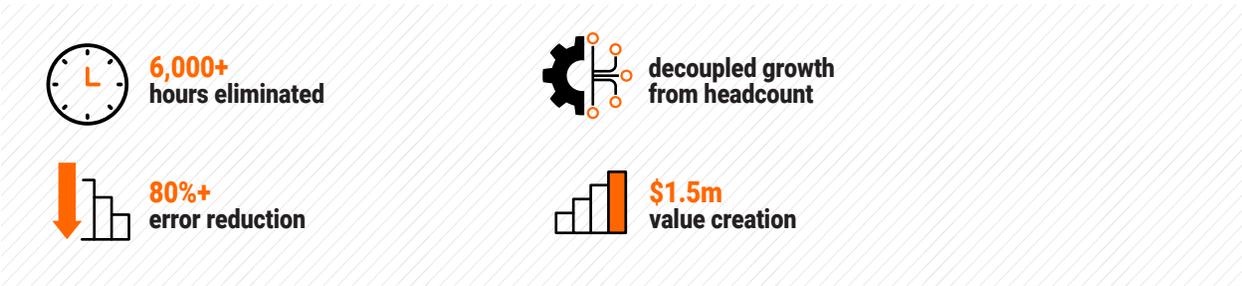

The Business Challenge

The process of searching through hundreds of inbound payroll forms per week to extract compensation and withholding information, which was then manually entered into the accounting system, consumed thousands of labor hours per year and resulted in an error rate of over 10%.

The Solution

REEA Global implemented an AI-enabled workflow process automation process that consumes all the emails and attachments in a monitored inbox, extracts the target data, and passes it to the accounting system. A verification process puts the nontechnical human operators in control of the data validation and automatically trains the model when corrections are made, driving accuracy rates up quickly after launch.

The Business Impact

The project also enabled a non-technical operator to monitor the system's accuracy and train the models with corrections made in a simple user interface.

We don't just deliver software – we become an extension of your team, committed to your success at every stage.
